SEND

implements send email functionality

- ↓
- For VB functionality, user first selects car type from dropdown menu. Then once selection has been made, new div listing all avail. cars of that type is shown. Once user has made that selection, New div featuring Car name, Car Info, and an IMG of the car displayed.
 - For "Contact US" page, Send email functionality is an HTML form that allows users to input text and clicking send button will open up their default email app with that text as the message & a dummy email address to send to.
